## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1, 3-13, and 15-23 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for performing DES operations on a general-purpose microprocessor as opposed to using dedicated microprocessors. Each independent claim identifies the uniquely distinct features of "a general purpose microprocessor operative to carry out a DES instruction and comprises an arithmetic logic unit having a logic circuit for performing expansion permutation, S-box substitution, P-box permutation and associated XOR operations; a register file providing operands to said arithmetic logic unit; and said register file includes general purpose registers that store states of the DES algorithm". The closest prior arts in combination, Orenstein et al. (U.S. Patent No. 5,787,026) with Boyle (U.S. Patent No. 6,118,870) and Schneier's Applied Cryptography, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
